  - Astro
  - React/Preact
  - Angular
  - Vue
- Site generators
  - Eleventy
  - Jekyll
  - Hugo

Recent projects

Capricorn ↗

Design systems in a micro-frontend monorepo using multiple frameworks, open source component libraries, headless components and a self built token based themeable design system.

Gemini ↗

Gemini is a theme driven, JSS based, platform agnostic design system for OpenSesame. I designed and built the system and component library, and worked with Design to connect to Figma tokens.

The Portland Pour ↗

A cocktail and beverage blog showcasing my product photography, graphic design, copy writing, and creative production in a headless blog I built using Ghost, React, and Express.
